

Introducing Solar Shading Systems® Motorized Plantation Shutters

Classic Wood Shutters With Multiple Panel LouverLevel™ Control

Our exclusive SSS-525 LouverLevel™ controller combines the latest technology with practical operation of our Solar Shading Systems Motorized Plantation Shutters. The controller operates via infrared commands from our transmitter or wall mounted keypad. The infrared codes are all learnable which allows any home automation system with

learning capabilities to be programmed to operate our shutters.

The louvers may be placed in one of 5 preset positions or tilted to any degree of openness you desire. The controllers networked together have the ability to operate up to 50 panels individually, as a group or any combination of sub-groups.

SSS-545 Key Pad combines the convenience or wall mounted control with a face-mounted infrared receiving eye for remote operation. The key pad will operate up to 30 motors, individually or as a complete group. The keypad is connected to our control network via one single telephone cord.

SSS-535 Programmable touch-screen can operate up to 50 shutter motors, individually or as a complete group. The transmitter may be used up to 75 feet away from the receiving eye. Use the transmitter to place the louvers in one of 5 pre-set positions or any position you desire.

SSS-550 Programmable touch-screen can operate up to 50 shutter motors, individually or as a complete group. The SSS-550 may also be used to operate up to 50 other Solar Shading Systems shades, blinds, drapery tracks and motorized blinds as well as other infrared systems such as TV's, DVD players, stereo's, VCR's etc.

SSS-528 IR Eye with 2" lead, can be mounted in SSS-530 box. (SSS-531 for J-Box mount). Custom lead length available to 100', or use our infrared booster and go another 1000'. The small size, 1/4 x 1/4 square, allows you to easily hide eye within design.

Plantation shutters—the beautiful, large louvered window coverings designed by the Romans more than 2000 years ago—are more popular today than ever before. Contemporary decorators and designers appreciate the timeless beauty of their straight, parallel lines, and more and more of them recognize that plantation shutters compliment every style of décor, from traditional to the most contemporary.

Now Solar Shading Systems®, an industry leader in motorized window treatments, brings plantation shutters' functional attributes into the 21st century. Introducing

Solar Shading Systems Motorized Plantation Shutters with multiple panel LouverLevel™ control. Classic, individually handcrafted, solid wood shutters that incorporate state-of-the-art motorization technology. These elegant shutters utilize miniature, low voltage motors hidden in each shutter

panel to position louvers automatically, maintaining precisely the same angle for every louver. Louvers in as many as 50 shutter panels can be instantly opened, closed or adjusted individually, or as a group, at the same time by pressing a button on your handheld remote or keypad.

Our exclusive V6 motor system seamlessly integrates with the LouverLevel™ control system. Motors and operating system are virtually invisible from exterior viewing, and carry the full Solar Shading System 5-year electrical warranty.

Motors are in backside of frame.

Back side motor cover.

Solar Shading Systems Motorized Plantation Shutters are handcrafted, one at a time, from the finest basswood. A broad selection of washes, stains and paints are offered. Fifty colors are standard, and computerized custom color matches are available. Shutters are backed with a limited lifetime warranty.

Shutters can follow the shape of most windows, maintaining the integrity of the interior and exterior design. Perfect arch plantation shutters are easily motorized, operated, and integrated with the same handheld remote or keypad.

Precise placement of the louvers is as easy as turning on a light switch with our handheld remote transmitter or keypad. You may also utilize 5 pre-set louver positions with the touch of one button. The 5 preset positions will operate each panel individually or in groups up to 50. These positions are user definable and may be altered to fit the most discerning client needs.

Solar Shading Systems Plantation Shutter louvers are available in three different widths: 2 1/2", 3 1/2" and 4 1/2".

5 user definable louver positions:
